Social* Data

Crowds* generating (not always voluntarily) data

Crowd + Outsourcing = Crowdsourcing: Word coined in 2006

A sourcing model in which individuals or organizations obtain goods and services, including ideas, voting, micro-tasks and finances, from a **large**, relatively **open** and often **rapidly-evolving** group of **participants**.

Currently, crowdsourcing typically involves using the internet to attract and **divide work** between participants to achieve a **cumulative result**.

It is widely applied to multiple domains

A platform for crowdsourcing mapping tasks and generate a global open geospatial database. The Humanitarian HOT-OSM branch is supporting emergency response around the world

Check out my new role: https://wiki.openstreetmap.org/wiki/Organised_Editing/Activities/Rio_Branco

Welcome to OpenStreetMap, the project that creates and distributes [free](#) geographic data for the world. We started it because most maps you think of as free actually have legal or technical restrictions on their use, holding back people from using them in creative, productive, or unexpected ways.

[More about OpenStreetMap](#) | [How to contribute](#) | [Where to get help](#)

COVID-19 Alerts

Register now to receive alerts when new COVID-19 cases are reported in your health region or county & receive summary notifications for decreasing cases over time.

Register for Alerts

Please note:

- Not all provinces are reporting by regional health unit. In this case, you may sign up for provincial case notifications.
- There may be discrepancies with the county or provincial total as many cases are missing region information.
- Visit our [terms of use](#) and [privacy policy](#) for more information.
- View our [map](#) of Canadian health regions & United States counties to review the data.

△ Easy

Time dimension makes analysis more complex.

Moving objects provide more information about behaviour and movement patterns.

* Lots of **mathematical modeling**.

“Ahora que hemos conocido Madrid sin contaminación”: el manifiesto de tres arquitectas para una ciudad ‘postcovid’

So, what to do
with all of this?

How about using it
for urban design?

Hands-on

What can we see from these data sets?

Let's see what we are thinking

<http://etc.ch/7CB8>

<https://www.directpoll.com/>

** This survey is designed only for the live session*

Group 1

Data: OSM + overpass turbo, Twitter + Pyqgis, (Airbnb from last two months)

Group 2

Data: Mobility data relate to the covid19 pandemic

Group 3

Data: Contagion and deaths data relate from the covid19 pandemic

Group 4

Data: Data from moving objects (Wikiloc)

Group 2

Data: Open areas and public spaces from cadastral information (buildings, parcels, blocks, streets)

A crowdsourced [presentation](#)

Slide 1

How feasible is this type of data to support the analysis? How representative of an urban feature is?

Slide 2

How this quick analysis relates to Urban Design?

New Data

Generate a single data set (table, layer, plot) to feed future analysis

How is social data complementing the analysis of urban issues?

How to make social crowdsourced data more representative of urban dynamics?

Space-time analysis

What else can we see from these data sets?

How cities are clamping down on cars

By Francesca Perry 29th April 2020

Cities around the world are seeing dwindling numbers of fossil-fuel powered cars on their streets during lockdown, and many are planning to keep it that way.

Source: <https://www.bbc.com/future/article/20200429-are-we-witnessing-the-death-of-the-car>

Population Density Maps

Our Population Density Maps help nonprofit and multilateral agencies plan vaccination campaigns, respond to natural disasters, and evaluate rural electrification plans. These maps help researchers assess the ways in which climate change and urbanization impact where people live.

Source: <https://dataforgood.fb.com/tools/population-density-maps/>

Time as the Z dimension

A QGIS approach using formulas

*hour(to_datetime("time")) +
minute(to_datetime("time")) / 60*

Hands-on

Some extra data to explore

What you'll learn

- How to view data from a Data Hub space on a map
- How to upload, tag and view larger GeoJSON files
- How to view the Data Hub space geodata in a variety of mapping tools

View data from a Data Hub Space using the GeoJSON Viewer

Duration is 5 min

Open the [GeoJSON Viewer](#)

Open this URL by clicking on the "Load Data" tab and copying and pasting this into the 'From GeoJSON URL' option: `https://xyz.api.here.com/hub/spaces/x-india-trains/iterate?limit=50&access_token=AcIj0Do6UKfvEULPewFlnEk`

You should see a map like this:

Source: <https://developer.here.com/tutorials/making-maps-with-xyz/>

Social/Crowdsourced data sets

- Mobile and Internet infrastructure coverage and antennas
- Micromobility (bicycles, scooters, carpooling)
- Location insights to convert visitors into customers <https://www.avuxi.com/>

Future scenarios after COVID19

[How Will the Pandemic Transform Urban Space?](#)

[Workforces in These Cities Have Highest Covid-19 Risk](#)

[COVID-19 'Immunity Passport' Unites 60 Firms on Self-Sovereign ID Project](#)

[“Ahora que hemos conocido Madrid sin contaminación”: el manifiesto de tres arquitectas para una ciudad ‘postcovid’](#)

Add your news headlines as well.

What would be the difference between space-time analysis and simulation?

How social crowdsourced data better feed simulation or spatio-temporal analysis?
